

# Vegedome

The versatile Vegedome efficiently sprays widths between 200 & 900mm.

The Vegedome has unrivalled width adjustment for a single head CDA sprayer. By mounting on the vertical plane, Enviromist have been able to find added flexibility in achievable spray widths. This is particularly handy in row cropping situations where row spacings may vary between crops. The Vegedome also has a wide range of applications when it comes to spraying road sides.

Width adjustment on each unit range between 200 and 900mm. Adjustments can be made simply by rotating the shroud between the front-on and side-on positions.

The Vegedome boasts the proven features of all Enviromist shrouded CDA products including:

- Individual head flow monitoring
- Shrouded CDA spraying allows for a controlled droplet size while virtually eliminating spray drift to off target areas.
- Option of brush or rubber skirting at the base of the dome to allow the unit to spray as close to the target area as possible.
- Ability to apply chemicals quickly, efficiently and effectively.
- Easily fitted to either a tool bar or existing spray unit.

## Vegedome Specifications:

Spray Width		Spraying Speed		Flow Rate		Weight	
mm	in	kph	mph	lph	USgal	kg	lb
200-900	8-35	4-10	2.5-6	12-15	3.1-4	10	22

Using a 60 Litre (15.8 USgal) tank and a spray rate of as little as 12 litres (3.1 USgal) per hour, the Vegedome can cover between 0.5 and 2.2 treated hectares (1.2 – 5.4 treated acres), travelling at 5kph (3.1 mph).
